WE ARE STOCKTON.

The General Plan of the Town of Stockton, Utah. 2020.
ACKNOWLEDGEMENTS

Mayor
Mr. Thomas Karjola
Town Council
Judy Bori
Vicki Nash
David Nutzman
Nando Meli

Student Team
This plan was prepared for Stockton Town by students in the Small Town and Resort Planning Class at the University of Utah. Team members include:
Jake Gallaher
Byron Head
Mikala Jordan
Kayla Mauldin
Teresa Mikesell
Bradley Potter

With special thanks to course instructor, Bruce Parker, AICP.

This plan was adopted on XX,XX, 2020.

INTRODUCTION

Why Plan?
There are many reasons to plan. Overall, planning helps a community thrive as the community it wants to be. Five more specific reasons include:

1. Planning helps communities choose their desired futures; in that sense, planning helps communities avoid change “just happening” to communities.
2. By linking data, local knowledge, and on-the-ground conditions, planning clarifies specific issues and identifies potential solutions.
3. Planning helps preserve strengths, mitigate problems, avoid threats, and achieve goals.
4. The planning process brings together community members through a common goal: bettering a community for the long-term.
5. Utah State Code 10-9a-4 requires each municipality in Utah to prepare a General Plan.

Plan Background
As Stockton’s previous General Plan was written by Tooele County staff in 2002, Mayor Thomas Karjola, Stockton Town Council members, and the Planning Commissioners recognized the need for a new General Plan. They coordinated with professor Bruce Parker, University of Utah, and City and Metropolitan Planning Department’s “Resort and Small Town Planning” Master’s-level class took on the General Plan as their semester-long project.

The graduate student team undertook this planning process with six purposes.

They wanted to ensure this draft plan was:
1. data-based,
2. informed by local knowledge,
3. directed by community input,
4. comprehensive,
5. accessible to understand, and
6. actionable.
MAKING THE GENERAL PLAN

Local Knowledge and Community Input

On Wednesday, January 22, 2020, Mayor Karjola spoke with the class at the University of Utah for over an hour. On Saturday, February 8, 2020, the class traveled to Stockton. Students spoke with Mayor Karjola and Planning Chair Don Hill for three hours and toured the town. Throughout the semester, students coordinated with Mayor Karjola and with the Planning Commission via email.

In February, students began public outreach. Hearing from Mayor Karjola that Facebook is a popular platform for Stockton residents, students crafted a Visioning Survey that was posted on Stockton's Facebook page. Additionally, to reach as many Stockton residents as possible, the survey was attached to March's utility bill.

A second survey, The Development and Opportunities Survey, was created to understand the community's feeling towards different types of development. The intent of the survey was to assess the future needs and desires of residents while identifying which existing elements should be preserved to uphold the small-town charm of Stockton.

Due to the COVID-19 global pandemic, the public outreach process of this plan was greatly hindered. Our interactions with community members were limited to online and paper correspondence. Government restrictions on social gatherings eliminated the ability of the University of Utah team to hold public meetings or workshops with the community.

Data-Based

Since getting where you want to go without knowing where you are is impossible, compiling accurate and reliable information is crucial for good planning. Students gathered information from various credible sources. The Brief History of Stockton, Utah (Stockton Bicentennial History Committee 1976) provided great insight and facts about Stockton's rich history. The United States Census Bureau's American Community Survey proved especially useful for gathering statistics. Whenever possible, data from the most recent survey, 2018, was used. In some cases, data from 2017 had to be used. The United States Census Bureau's Decennial Census was also used for its accuracy, although 2010 data is a bit outdated for 2020. Affordable housing statistics and projections were obtained from the Utah Department of Workforce Housing, Division of Housing and Community Development.

Reading the Plan

This plan contains six major sections: who we are, land use, connectivity, housing, economic development/recreation, and the annexation policy plan. "Who we are" presents information regarding Stockton's history, current demographics, housing conditions, and the economy. Understanding Stockton's current conditions ensures that the plan is well-informed and data-driven. The five topic-based sections share a template. Each has:

- An analysis of the topic.
- A description of Stockton's desired future for that topic, including goals.
- A quote from a Stockton resident or a summary of survey results, showing how public feedback informed the analysis and description.
- An explanation of underlying planning concepts.
- An implementation plan, outlining the specific actions to take, a timeline for completion, the relative cost, the responsible party(ies), and the goal(s) that each action supports.

Throughout the plan, look to this speech bubble for quotes from residents and information about how community feedback guided the document formulation.

USING THIS DOCUMENT

This plan can be useful for elected officials, town staff, and residents alike. All can use the plan as a tool for generating dialogue about Stockton and authenticating that proposed town projects align with Stockton's goals. Uses specific to your role arise as well.

- If you are a RESIDENT: you can use the plan to understand Stockton's goals and trajectory, develop or expand a business, and inform your real estate decisions.

- If you are an ELECTED OFFICIAL: you can use the plan to understand your constituents' long-term goals, coordinate the budget with the community's goals, and guide your decision-making.

- If you are a TOWN EMPLOYEE: you can use the plan to direct applications for grants, identify what kind of development is appropriate and where, guide capital improvements, coordinate ordinances and regulations with the community's goals, and protect the town's character.

- If you are an ARCHITECT, BUILDER, or DEVELOPER: you can use the plan to understand the community's character and design projects accordingly, learn the town's development priorities, and identify what kind of development is appropriate and where.
WHO WE ARE

In 2010, 540 people lived in Stockton, and Tooele County hosted a population of 58,278 (2010 Census). By 2018, the U.S. Census Bureau estimated that Stockton’s population had increased to 722 while Tooele County’s population jumped to 69,907 (USCB 2018). Due to Tooele County’s available land for development, its location, and its access to the opportunities offered in the Salt Lake Valley, Tooele County is expecting continued high growth.

What Tooele County’s growth means for Stockton is uncertain. A likely scenario is continuous growth that spills over from Tooele City as Tooele’s land develops. Utah’s Department of Workforce Services projects that Stockton’s 2025 population will be 945 (DWS Affordable Housing Calculator). A 2025 population of 945 would mark significant growth for Stockton. However, this projection takes the growth rate of previous years and applies that to the future, and it does not take into account growth from annexation.

Planning ahead will allow Stockton to maintain its identity and values in the face of different scenarios regarding population change. The first step is understanding existing demographic, economic, and housing conditions. Knowing the existing conditions orients you; if you know where you are, it’s a whole lot easier to direct yourself to your destination. To that end, the next pages provide a summary profile of the Stockton community.

Vision: Stockton will embrace its history, continue to build on shared values, and be recognized as a close-knit community that lifts up all of its neighbors.
2018 Demographics

- 61 People identify as Hispanic or Latino
- 68 Veterans
- 74 People have disability status
- 258 Households
- Average Household Size = 2.8 people
- Median Age = 44.4 years
- 70 Currently Enrolled High Schoolers

The most populated demographic brackets are boys aged 15 to 19 and women aged 50 to 54.

2018 Economics

- 332 People in the Workforce =
  - 56.7% Labor Force Participation Rate

Employment by Industry: # Employed

- Construction: 53
- Educational services; health care; social assistance: 52
- Retail trade: 44
- Manufacturing: 36
- Arts; entertainment; recreation; accommodation; food services: 29

- Finance; insurance; real estate; rental; leasing: 23
- Transportation; warehousing; utilities: 23
- Professional; scientific; management; administrative; waste management services: 22
- Other services, except public administration: 11
- Wholesale trade: 9
- Agriculture; forestry; fishing; hunting; mining: 5
- Information: 1

- Median Household Income: $61,875
- People in Poverty: 7.8%
- Average Commute to work: 29 minutes
- Unemployment: 2.0%
OUR COMMUNITY

Stockton is unlike anywhere else in Utah. While residents praise its rural, small-town feel, the Town is just a short drive from Tooele, Salt Lake City, and even Lehi. This means residents have access to the growing economic activities in the surrounding metro areas. This is all while enjoying unparalleled views of the Oquirrh Mountains and immediate access to public lands for off-roading, hunting, fishing, and hiking. But what really stands out about our community is the people.

We are the Town that streams our commission and council meetings over Facebook Live so that all our residents can get involved in community happenings, regardless of their work schedules or parental obligations. We are the Town that recorded the lineage and personal histories of every resident in 1976 in order to produce a comprehensive book on our history. We are the Town, that during the COVID-19 pandemic, drove the Easter Bunny around in the back of a pick-up truck to waive and pass out candy to all of our children, so that their holiday may be special even during a mandated quarantine. We are the Town that will continue to care for our home and for each other.

We are Stockton.

Demographics

Compared to the state of Utah, Stockton has a much higher median age and a smaller household size. If future households in Stockton look like the average household in Stockton today, then housing needs in Stockton may be different than what the zoning code currently plans for. For example, there may be a strong need for cozy, 2- or 3-bedroom homes rather than expansive 5- or 6-bedroom homes. This ties into Stockton’s water concerns as well: the kinds of homes that are built influences how much water and other utilities will be needed.

The population pyramid shows a declining male population over time, besides the 15 to 19-year-old bracket exception. The female population, on the other hand, is oscillating.

Subsets of Stockton’s population may require different services than the population at large. Stockton’s veterans may need transportation services to the nearest Veteran’s Association; Stockton’s Hispanic and Latino residents might visit other places to fulfill cultural desires; residents with a disability status may benefit from better access to health care services.

Economics

There is a large discrepancy between male and female median income. What is causing this discrepancy? Are more women choosing not to work? Are women employed in lower-paying jobs? Is a lack of transportation options limiting what jobs Stockton women can access? Is a lack of convenient or affordable daycare options another limiting factor? Depending upon these answers, different strategies can be undertaken to improve the economic condition of Stockton women. For example, is there opportunity to provide job trainings, inform the community of job fairs, or hold monthly workshops on resume-building and cover-letter writing? Is there opportunity for home businesses? Can a carpool system be set up?

Values

Community feedback revealed four central values which guided the creation of this document:

- Stockton residents value a rural lifestyle that is quiet, slow-paced, and rooted in wide-open spaces.
- Stockton residents value immediate access to recreational amenities including viewsheds, areas for hunting and fishing, and hiking and off-roading trails.
- Stockton residents value their past, most significantly, their early mining and ranching culture.
- Stockton residents value relationships with one another, strong community bonds, and altruistic attitudes. The community’s culture is based on helping neighbors and working collectively toward common goals.

“We have quality residents who really step up when a community neighbor is in need.”

Why Embrace Our History?

The history of Stockton is held dear by residents of the Town. Many of the men and women who live in the area today descended from the early miners and farmers who were instrumental in Stockton’s founding. Remembering our past helps us better understand the traditions, way of life, and culture that we value as a community.

The past can also inspire the future. Stockton once held regional amenities such as the Train Depot, I.O.O.F. Dance Hall, and the state’s first electric light. This history, combined with the small-town lifestyle and connection to the outdoors, is part of what makes Stockton stand out from other rural towns in Utah. This is a unique place that should be celebrated, preserved, and nurtured for years to come.

A BRIEF HISTORY OF STOCKTON

The area that later became known as Stockton was first inhabited by Native Americans with Goshute and Piute ancestry. The earliest peoples referred to this area as Shambip, believed to translate to ‘Rush’ in English. This is where Rush Lake (previously Lake Shambip), which touches the southwest border of Stockton, derived its name.

In 1854, Colonel Steptoe and the Second Detachment Company of Artillery of the United States Army arrived in the area and set up camp along Lake Shambip. The purpose of the detachment was to monitor Mormon pioneers in the area and preserve the peace. Soldiers at Camp Relief traded with the native peoples of Shambip for trinkets and jewelry, likely made from the precious metals buried in the hills and mountains surrounding Stockton. Over time, native peoples were pushed out of the area by the white settlers, and little is known about the history or culture of those early inhabitants of Shambip.

Eventually Colonel Steptoe and his Company departed for California, but a few soldiers stayed behind to make their home in the area. In 1862, another Company arrived out of California, this time led by General Patrick Connor. The General was interested in the area’s metals and sent his soldiers searching the hills. In 1864, those soldiers located lead and oxide ore. General Connor commissioned his men to survey the town and lay out a street system. The area known as Shambip, which became Camp Relief, was renamed Stockton by the General. It is believed that General Connor named the town after Stockton, California, a place that had experienced its own gold rush in 1849. The Town’s main street was named Connor Avenue after the General.

Extraction began quickly after the discovery of silver, gold, copper, and lead in the hills. The population of Stockton soared to over 4,000 people during the peak of the mining days. Homes were built along with saloons, boarding houses, and shops (including the town blacksmith). Mining operations in Stockton became very important to the state and nation’s economy. Stockton was the first town in Utah to use electric lights, and the first telephone in Tooele County was installed in 1890 at Stockton’s Honerine Mine. The area was home to the first smelter west of the Mississippi. Stockton officially incorporated in 1901.

This bustling mining town was even home to a jail and a train depot. The Stockton Jail was built in 1902 and is nestled at the base of Tabernacle Hill on Clark Street. Although it was designed to contain even the toughest of men, the jail was never used for much more than an overnight holding cell for drunks or those who had hitchhiked a ride on the train. The jail remains today, although it has not been in use for some time. The train depot was built along the Union Pacific tracks in 1904-05. The depot served both freight and passengers. Soldiers coming home after the end of World War I stuck their heads out of the train windows and waved joyously as they passed through Stockton on their way to California. Unfortunately, the depot was later demolished.

"Precious also is the memory of my parents and of being awakened by my mother early in the Spring as she nudged us saying, 'Wake up, listen to the Meadowlarks singing; they are singing Stockton's a Pretty Little Place!' As we listened then; and even now the Meadowlark seems to be singing, 'Stockton's a Pretty Little Place’"

- Katie Painter Kading Ross 1976
OTHER TRADITIONS

• “Pay-day candy” at the town General Store, whereby every payday, miners would come pay their debt at the store. In return, for the payoff, the store-keeper would give the miner a sack of candy to enjoy.

• Christmas Eve Program and “sock tradition,” where Stockton residents would gather at the church to watch children perform in dances and a program on Christmas Eve. Santa would appear during the night and hand out a large sock full of candy, nuts, and an orange to each child. This tradition was started by the miners of the town, who would pool their money every holiday season to ensure that each child woke up to a full stocking from Santa on Christmas morning.

• “May-pole Dance,” a spring celebration which featured school children dressed in all white, putting on a performance with colorful streamers. The day was complete with picnics and walks into the hills above Stockton.

• “Rail-walking” on the tracks by the train depot was a common recreational activity on Sunday afternoons after church.

• The “I.O.O.F. Hall” (Independent Order of Odd Fellows) served as the gathering place for much of the community. Built in 1902, the hall was used for meetings of lodge members and for recreational purposes. It hosted every public dance, card party, and many Christmas programs and school functions. The dance floor featured in the I.O.O.F. Hall was well known and highly regarded in the county, and many aspiring local musicians played there.

Present Day Stockton

Although extractive industries still impact the town, Stockton’s employment in mining has dwindled. With the loss of mining, the Town has seen a great decrease to its population, dropping from over 4,000 residents to under 800. The population that remains includes descendants of early Stockton miners and ranchers, as well as households that have sought to escape the surrounding bustle of the Wasatch Front for a quieter, country lifestyle. Residents still enjoy baseball tournaments and the sound of the meadowlark. And hunting and off-roading through the surrounding hills and mountains are popular pastimes. The town has beautiful views and proximity to recreational opportunities to offer current and future generations.

Many of the historic sites and buildings have been lost over the decades, but Stockton residents hold on to the stories of their ancestors. A few nods to Stockton’s past remain:

• The Stockton Jail: a single-cell jail built in 1902 to house criminals during the heyday of Stockton’s mining operations. The jail is no longer in service but remains standing at the base of Tabernacle Hill. A chain-link fence keeps people away from the structure.

• Stockton Daughters of Utah Pioneers Museum: located in Town Hall, this collection of artifacts and news clippings tells the story of Stockton’s past. It features photographs, machinery, and even early baseball uniforms. The museum does not have regular hours of operation but is open to the public upon request.

• Stockton Town Hall: Town Hall, erected in 1929, was originally used as a schoolhouse. Today it hosts town staff and serves as the location of community meetings.

• Steptoe Historical Marker: Located along Rush Lake, just outside of Stockton’s borders, this site marks the place where Colonel Steptoe and his troops set up Camp Relief. Other historical markers in Stockton symbolize important people and events (such as the first electric light in Tooele County).
Case Study: Coalville, UT

Coalville, Utah, in northeastern Summit County, has many similarities to Stockton. A coal vein was discovered in 1854 in the Chalk Creek area, launching a mining boom. A railroad spur was built in 1872 to take coal from Coalville to the Union Pacific main line in Echo, Utah.

Coalville has successfully retained its mining heritage through the addition of several small parks and monuments in the community. In front of Town Hall (pictured) there is a scene of an underground mine, created with donated materials and volunteer labor. At the County Courthouse, an old mining cart stands as a symbol of the past. In 2005, Coalville was awarded a grant from UDOT to revitalize its Main Street. Part of this project included the construction of a pocket park, which features an old Ford truck salvaged from one of the area's abandoned mines. The town's residents have been very supportive of historic preservation efforts, even showcasing old mining carts in their own front yards. Shortly after the Main Street Revitalization Project, an abandoned motel was torn down and replaced with a replica of the original Coalville Schoolhouse that had stood on the site (although the replicated schoolhouse now serves a modern function as a car wash). Because of volunteer support and available grant funding, many of the improvements made in Coalville were done with little cost to the Town. Stockton can learn lessons from Coalville's approach and use those lessons to launch its own historic preservation campaign.

History of Coalville taken from Summit County Historical Society 2020.

MOVING FORWARD

It is obvious that Stockton is a community that knows what it stands for, values, and desires. Stockton residents know each other and care about their neighbors' welfare. In terms of internal communication and collaboration, Stockton sets an example for other small towns in Utah. The use of Facebook Live for public meetings in addition to the opportunity to participate in public meetings in-person is innovative, and the result of having two methods for participation is more widespread community engagement. This practice should be continued. Town celebrations are another great way to foster community engagement. Bringing back Stockton Days is an opportunity to celebrate Stockton’s history while cultivating a sense of community.

Stockton can also leverage collaborations with other municipalities, agencies, and entities to accomplish quality of life improvements for residents. Regular meetings among Stockton representatives and representatives of other entities can lead to mutually beneficial relationships. From information-sharing to resource sharing to event sponsorship to capital improvement funding, many opportunities arise from partnerships across boundaries.

Goal: Continue growing strong, mutually-beneficial relationships between Stockton and other municipalities, agencies, and entities, as well as among Stockton residents and elected officials.

Objective 1: Enable the success of Stockton through collaboration and coordination with others on projects that transcend boundaries and/or would benefit from engaging all stakeholders.

Coalville Town Hall (contributed by Teresa Mikesell 2020).
Utah Code §10-9a-403 requires every municipality in the state to include a land use element in its general plan. That land use element shall designate the long-term goals and the proposed extent, general distribution, and location of land for the following uses: housing for residents of various income levels, business, industry, agriculture, recreation, education, public buildings and grounds, open space, and other categories of public and private uses of land, as appropriate. This section of the Stockton general plan fulfills this requirement.

This section of the general plan will discuss the land on which the town sits, how it is currently being used, and how it may be used in the future. These uses are determined by the town's zoning ordinances, laid out in the Town Code. These ordinances establish different zoning districts. All land within the jurisdiction of the Town of Stockton falls into one of these districts. Each district has different rules for what activities can and cannot be conducted on the land within it. The following pages provide a map of Stockton's current land use and a brief description of each of Stockton's seven (7) zoning districts.

Vision: Stockton will preserve its rural character and small-town feel by concentrating expected residential growth and commercial development over the next 10 years along Highway 36, leaving the rest of the town with its current look and feel.
The Role of Land Use and Zoning:

In the field of planning, land use is the concept of how the land in a given area is developed and utilized. Will it be left undisturbed for conservation? Used for farming or livestock grazing? Split into parcels and developed for houses or businesses? Designated for a new road or railroad?

Land use is the single most influential decision for how a town or city will grow, shrink, or remain the same. It determines where people can live, where they can work, where they can shop, and how close these different uses can be to each other. The organization of these land uses determines the layout of transportation, sewer, power, and water networks, and thus, determines the fabric of the community.

EXISTING CONDITIONS

The Town of Stockton encompasses 1.69 mi² (or 1,083 acres) of land in Tooele County, Utah. The town’s residents cherish its small-town feel and rural character. With an estimated 2018 population of 722, the town as a whole has a population density of approximately 427 people/mi². By way of comparison, Salt Lake City’s estimated 2018 population density was 1,805 people/mi², and that of Tooele City was 1,643 people/mi². Just under 84% of the town’s land is currently in one of the three agricultural zones. The remaining 16% is split between Residential (8%), Residential-Commercial (41%), and Light Industrial (3.9%). Although there is an existing Multiple Residential (R-4) Zoning District in the Town Code, no land is currently zoned for that district.
We estimate that there are approximately 344 acres of land available for development in Stockton, leaving 258 acres once area for roads and utilities is subtracted. Based on the current zoning of this land, a maximum of 141 single-family homes could be supported. There are 167 children under the age of 18 living in Town (ACS 2018 Estimates), meaning that not all of the current generation of children will have the ability to move into their own house in Town (if they desired to do so). Additionally, the town's population is predicted to grow by 223 people by 2025. With expected internal and external growth, competition for housing will increase and likely drive prices up.

The build-out analysis considers only residential uses. Commercial uses are also important to the vitality of Stockton. What businesses does the Town need to support its current and projected population? With current zoning, is there room for those businesses to grow and prosper? The R-C zone is the only existing zone that allows for commercial businesses, such as retail and food services. One parcel appears to be vacant in this zone, providing 0.53 acres of space for new commercial development.

This was a simple study analyzing the capacity of Stockton's current zoning patterns to accommodate new development. Overall, the zoning does not appear adequate to meet future needs for housing and commercial development. However, re-zoning is not the only solution. Other remedies include infill development, a lowering of minimum lot sizes, or even an ordinance that allows for accessory dwelling units on single-family lots.

### BUILD-OUT ANALYSIS

</tr>
</tbody>
</table>

* Vacant acreage was calculated at the parcel level and estimated using aerial searches for building and structure footprints. For the purposes of this analysis, vacant land includes land currently used solely for grazing or crop production, as this land could easily be developed at a later date for residential use. The available vacant acres represent 75% of the total vacant land in each zone, recognizing that approximately 25% of the land will be given over to streets and utilities should development occur.

** Housing Units Allowed Per Acre is based on Stockton's current zoning standards and makes estimates based on the single-family home. The R and R-C Zones do allow for multi-family dwellings as conditional uses, but very little vacant land is zoned in this way.
Land Use Transitions

One of the hallmarks of a rural town is low density - the number of people or buildings per square mile. People enjoy having "room to stretch their legs." This allows residents plenty of space to play in the back yard, maintain a garden, or build a garage or workshop. For many people, it is the ideal way to live.

However, businesses like grocery stores, barbershops, restaurants, and clothing stores prefer to locate in denser areas where more people are walking and driving past. For them, higher density means more customers.

Luckily, the Town of Stockton can have both without sacrificing either. By assigning the town's land into different zoning districts with different rules for density, the town can ensure that some parts of town maintain a rural, 'open space' feel, while others are allowed to grow.

The land along Highway 36 can be allowed to develop with a higher density that is more friendly for business, while neighborhoods and outlying areas can maintain their current spacious character (all the while benefiting from the businesses that locate within close proximity).

When asked, "What do you love about Stockton?", one resident responded, "open spaces!" Six respondents said they would encourage agricultural land use, and five respondents identified agricultural land as very important to Stockton's future development.

- Stockton Development and Opportunities Survey (2020).

MOVING FORWARD

Stockton residents prize their town's rural nature and small-town feel, but that character should not be taken for granted. As Utah’s population continues to grow, particularly in the Salt Lake and Utah Valleys, that growth may very well make its way west to Tooele County and the Town of Stockton. There are two key actions the town can take now to help prepare it to deal with this anticipated growth: create an open space or conservation zoning district to protect currently undeveloped lands, and encourage new development to fill out the existing R-C zoning district before expanding the district’s boundaries.

An open space or conservation zoning district is a zoning district dedicated to preserving currently undeveloped land. The town currently has many acres of vacant land in the A-1, A-2, and A-4 zoning districts. Designating some of that land as open space within a new zoning district will help protect it from the threat of development.

The second action that the Town of Stockton can take to preserve its current small-town character is to focus any new commercial growth into the existing R-C zoning district along Highway 36. When someone decides to open up a grocery store, hardware store, or restaurant in town, that business should be strongly encouraged to locate along the town’s main street. Concentrating this development in one location will serve two purposes. First, it will help create a sense of place along the town’s main street, a benefit that will be further discussed in the Economic Development section of the plan. And second, it will prevent new businesses from spreading out across town, which could compromise Stockton’s small-town feel. This strategy will help develop a “downtown” of sorts where people can run errands in one centralized location while leaving their existing neighborhoods unchanged.

The rural-urban transect shows how zones can be organized to ease the transition between land uses of different intensities. Stockton is unlikely to see land use in the T5 or T6 Zone, but small commercial businesses along Highway 36 could follow the patterns of the T4 (General Urban Zone). These more developed zones should be buffered by zones with lower-intensity uses. Photo credit: Congress for the New Urbanism 2017.
Utah Code §10-9a-403 requires that every general plan includes a transportation and circulation element. The element must address the location and condition of existing street typologies, active transportation infrastructure, and transit options. It must also correlate with population and economic projections and relate to the land use element of the general plan. Although this section of the plan satisfies the requirements of the Utah Code for the transportation and circulation element, we have instead referred to this chapter as 'Connectivity'.

The Connectivity Chapter focuses on connecting residents with the places and amenities needed to satisfy their daily needs. It considers not only vehicular travel, but also walking, biking, and other modes of transportation. We expect that Stockton’s population will continue to grow in the next few years, with some projections estimating a 2025 population of 945 residents (DWS Affordable Housing Calculator). It is critical that the town finds strategies for accommodating this growth while preserving the ‘small town, rural feel’ that residents most love about Stockton.

Vision: Stockton will increase the number of daily needs that residents can meet without having to travel out of town. Stockton will maintain its small-town charm and spare itself from noisy and unsightly traffic by providing opportunities for people to travel by walking, bicycling, transit, or other modes of transportation beyond the private automobile.
What Is Planning for ‘Connectivity’?

Transportation is a means to an end. And in Stockton, the end that we envision is a community where people, regardless of age, income, or ability, can access their daily needs and participate fully in civic life. Planning for connectivity means providing all residents with the infrastructure or programs they need in order to:

EXISTING CONDITIONS

Most of the places that Stockton residents frequent on a daily basis (schools, medical facilities, grocery stores...) are accessible only by car. The nearest grocery store is almost 8 miles from Stockton’s Town Hall, and the nearest elementary school is nearly 6 miles away. Both of these destinations are located within the City of Tooele. Within Stockton’s town limits, residents visit the Post Office daily to pick-up their mail. They also take advantage of Stockton’s recreational assets, including the newly improved Alex Baker Memorial Park.

The main corridor through town is State Highway 36, also called Connor Avenue (Stockton’s Main Street). The highway receives an annual average daily traffic (AADT) load of 5,600 vehicles (UDOT 2016). It acts as a barrier to walking and biking activity between the east and west sides of town. Not a single pedestrian crossing existed on the highway as it passed through Stockton at the time of this plan’s development. Silver Avenue, which connects Stockton with the South Rim Development to the west, receives an AADT of 1,000 vehicles per day (UDOT 2016). This number is likely to increase as more housing is developed in South Rim.

Sidewalks line both sides of Highway 36 through Stockton from Kings Ave (north) to Silver Ave (south). In other areas of town, the availability of sidewalk is sporadic, and where it is available, it has often not been maintained. Currently, no bike lanes exist through Stockton. But several of the roads could become bicycle-friendly with minor improvements. There are no fixed bus routes through town, but demand-response bus services are provided on a limited basis through Tooele County. The majority of these services are only available to seniors and persons with disabilities (Tooele County Transportation 2020).

More than any other item, survey respondents claimed that ‘roads and services’ in Stockton were in most need of improvement. Eight survey respondents (44%) marked that they strongly desire the addition of sidewalks or a multi-use path in town.

- From the Stockton Development and Opportunities Survey 2020.
According to OntheMap Data, in 2017, none of the jobs available in Stockton were actually filled by Stockton residents. Of Stockton’s 302 workers in 2017, 100% were shown to be employed outside of town. The greatest employment destination for Stockton workers was Salt Lake City, which employed almost 20% of workers. Tooele City followed close behind. Grantsville employed the third most Stockton residents (approximately 6 percent). Some of this has changed since 2017, and now a few residents work from home.

The majority of Stockton workers drive alone to work (73.8%). However, carpooling is also a popular choice, with 17.8% of the population driving to work with at least one other person. A small proportion of Stockton’s population also reported walking to work, taking a taxi, or working from home. On average, the commute time for Stockton workers is 28.9 minutes.

Although driving is the most popular transportation option in Stockton, it should be noted that there is a small proportion of the population that does not have access to a car (1.8%). Even among those who have access to a car, there is no guarantee that all of Stockton’s residents aged 16 years and over have the ability to drive. Old age, illnesses or disabilities, and other factors can contribute to a person’s unwillingness or inability to get a license or operate a vehicle. Planning for connectivity means considering the needs of the entire population and not just those who have access to a personal automobile.

The Average Commute Time for Workers from Stockton is 28.9 minutes.

MOVING FORWARD

Stockton faces great challenges when it comes to connecting residents with their daily needs. Most residents must leave town to access groceries, employment opportunities, education, and healthcare. This makes it very difficult for those who cannot drive or do not have access to a personal vehicle. Stockton can improve its connectivity by offering a wider array of services within its limits. The Town can provide resources and encourage residents to grow edible vegetation on their properties, as well as on Town-owned lands. Stockton may proactively seek out tenants for its underutilized spaces if those tenants can provide essential services, such as healthcare, food production or educational enrichment.

But there are also strategies Stockton can employ to improve access to the amenities already offered within Town, such as Town Hall, the Post Office, and recreational sites. Priority should be given to increasing opportunities for those who cannot drive (i.e. children, the elderly, and persons with disabilities). Existing transit service from Tooele County does not currently meet all of the needs of Stockton residents, but gaps in service could be filled through strategic partnerships with local churches and senior centers. Low-cost infrastructure improvements can be explored to improve conditions for walking and biking. And the Town can create opportunities for residents to use other modes of transportation, such as golf carts, by writing provisions for such use into Town Code. Maintaining Stockton’s small-town charm, including sparing Stockton from the traffic conditions faced by its surrounding larger cities, requires planning for a town that is not reliant solely on automobiles.

Low-Cost Solutions for Improving Walking and Biking Conditions

Improving conditions for walking and biking brings big benefits to small towns. Active transportation networks:

- Allow people to travel freely throughout town even without a car.
- Improve mental and cardiovascular health.
- Reduce traffic congestion and air pollution.
- Create a desirable atmosphere for residents, visitors, and businesses.

For the many benefits it provides, the cost of implementing better active transportation infrastructure is not insurmountable. Planting trees and flowers between the road and sidewalk can make people feel more comfortable walking. Extra space for walkers and bikers can be created in some instances simply by repainting lines. One strategy that is experiencing success in rural towns is the implementation of advisory shoulders on local, low-traffic roads. This work well along streets that have no sidewalk but can offer shared space for walkers and bikers. More information is available in the Small Town and Rural Multimodal Networks Guide referenced in the Appendix.

“I always like the fact that kids and adults could ride their bikes, motorcycles, and 4-wheelers within the town. . .”
- Response from Stockton Visioning Survey 2020

Goal: Improve conditions for walking and biking in Stockton and minimize the threat of increased traffic congestion.

Objective 1: Provide opportunities for Stockton residents to meet daily needs without having to travel out of town.

Crosswalks do not have to be standard white bars. Unique designs can contribute to the community’s character and bring people together. Stockton should consider involving volunteers in the design of pedestrian crossings and work to incorporate symbols (mining culture, wildlife, mountains, meadowlarks) through this form of “street art.” Top photo credit: Zest Events International 2017. Bottom photo credit: 9News 2018.
Why would a General Plan consider something as personal as housing—the places where we barbecue chicken with our families, tuck our toddlers into bed, line the walls with photographs? Precisely because housing is such a crucial part of everyone’s daily lives, communities can use General Plans to explore housing problems and potential solutions. Commonly, housing issues arise from population change (growth that exceeds housing supply or decline that leaves behind vacant lots). Housing design, affordability, density, safety, and location are all qualities that communities can consider in their General Plans to address housing problems. Utah as a whole has experienced rapid population growth in recent years. The growing population has spurred lots of development, yet the housing supply is generally not keeping up with demand. Tooele County is experiencing rapid growth as the cost of living in Salt Lake County has become increasingly cost-prohibitive. If the cost of living in Tooele City becomes too expensive, what could this mean for Stockton?

This section explores some important “what if” questions about housing in Stockton. Proactive planning regarding housing will be crucial to preserving Stockton’s rural character in the face of potentially substantial population changes in nearby areas.

Vision: Stockton will remain a family-focused community with a rural lifestyle while enabling housing opportunities needed to support residents of various life stages.
What is Multigenerational Housing?

Multigenerational Housing provides an opportunity for at least two generations of family members to live together under one roof. One example is a single-family home occupied by parents and their young children, with an attached ‘mother-in-law’ apartment above the garage for aging grandparents. Multigenerational housing provides numerous benefits, including:

- Improving affordability by allowing more family members to live together and contribute to rent or mortgage costs.
- Strengthening family relationships and decreasing loneliness among socially vulnerable groups.
- Allowing children to care for elderly parents without sacrificing their own living space.
- Reducing childcare costs by making it easier for older family members to watch over young children.

For more information, visit the HUD page on expanding multigenerational housing options.

EXISTING CONDITIONS

- 1/5 of renters and 1/5 of homeowners are cost-burdened with their housing, meaning they spend more than 30% of their income on rent or mortgage payments. Determining what aspects of housing costs are most difficult to manage for these populations is the next step. From there, residents can be linked to appropriate resources, such as non-profits that repair, weatherize, or increase the energy efficiency of, houses.
- Almost 2x as many households have moved into Stockton since 2000 as before 2000. New growth may exacerbate that statistic, and sometimes communities experience conflict between new and old households. Respect and communication can turn differences into strengths.
- Affordable housing is an issue, as there is a high rate of cost-burdened housing and a current housing deficit of 4 units in Stockton. Housing affordability will likely become more of a challenge as Tooele County develops. Developing strategies now can improve this situation and prevent it from worsening.
- Unaffordable housing can push out long-term residents on fixed-incomes, such as retired people or people with disabilities.
- High housing costs can make it impossible for the community’s young adults to stay in Stockton and invest in the community.

In 2017, 19% of renters & 22% of homeowners were COST-BURDENED, meaning they spent more than 30% of their INCOME on housing expenses.

In 2017, there was an affordable housing deficit of 4 units.

30 structures were built since 2014; 59 were built between 2000 & 2009; 56 were built between 1990 and 1999; and 135 were built before 1990.

Residents felt that housing strongly influenced the ability of Stockton to retain its small-town atmosphere. One-third of Development and Opportunities Survey respondents (n=6) saw housing density as a main contributor to the town’s rural feel. Four respondents (22 percent) said they valued affordable living opportunities in Stockton. Affordable living is at risk as growth continues without the addition of new housing units.
Resident indicated strong preferences for limited additional residential development and for maintenance of Stockton’s rural, small-town feel. Because outside growth pressures are creeping toward Stockton, acting now will enable Stockton to preserve its much-valued character in the face of Tooele, Salt Lake, and Utah Counties’ high growth rates and expanding urban footprints. When it comes to upholding community character, design has a far greater impact than density. Which feels less rural: poorly designed McMansions packed in rows with no character, no lawns, and no open space? Or, well-designed craftsman homes and duplexes on decently-sized lots, in a conservation subdivision with dozens of acres of open space for ATVing and hiking? Additionally, rapid nearby growth will likely impact the real estate market in Stockton. Housing affordability should be addressed before costs rise to unsustainable levels for Stockton residents: retaining young people is important for Stockton’s long-term sustainability, and having great aging-in-place resources can incentivize middle-age adults to choose to retire in Stockton. Because of these factors, creating a conservation subdivision ordinance and providing resources to enable successful aging-in-place are key strategies for maintaining high quality, affordable housing that upholds Stockton’s rural character.

**What is a Conservation Subdivision?**

A Conservation Subdivision, also known as a Cluster Subdivision, is a residential development pattern that allows open-space to be preserved in a community. The units are clustered on the development site, and a significant amount of space is left open and undeveloped. It is an especially useful tool for communities that value their open, natural landscape but experience increasing development pressure that threatens the existence of any open space.

**Benefits:**
- Maintains natural landscape.
- Minimizes maintenance and operation costs. Clustered houses mean there is:
  - less roadway to pave and plow,
  - shorter utility lines to install and maintain, and
  - shorter bus and waste removal routes.
- Reduces cost of site development, creating the opportunity for the inclusion of affordable units.
- Promotes walkability.
- Still allows for large, private lots while additionally creating outdoor recreation opportunities.

| Table: Conservation Subdivision Ordinance |
|---|---|---|---|---|---|
| **Adopt a Conservation (Cluster) Subdivision ordinance.** | Town of Stockton | 4 months | $5 (planner/lawyer fees) | Is ordinance adopted? Does new development reflect Stockton’s character? | Conservation Subdivisions: Explanation & Sample Ordinances from New Hampshire |
| **Adopt a Community Connectivity ordinance** | Town of Stockton | 4 months | $5 (planner/lawyer fees) | Is ordinance adopted? Does new roads and paths connect the community? | Street Connectivity Zoning and Subdivision Model Ordinance |

**Goal:** Housing development will reflect Stockton’s rural character while honoring the surrounding natural landscape.

**Objective 1:** New developments will facilitate rather than encumber residents’ access to open space and outdoor recreation opportunities.

**Proposed Action(s):** Lead(s): Timeline: Estimated Cost: Metric: Resources/Tools:

Updated September of each year annually. $ (time, printing fees) Are residents with expressed needs getting their needs met? Tooele County Housing Authority
- Create a partnership program between teens and older residents, whereby teens earn volunteer hours and learn from older residents while they complete needed lawn and home maintenance for the older residents. Town of Stockton; Residents 2 months None Does program exist? Are high schools utilizing it? Intergenerational program engages whole community with senior citizens
The economy is a crucial component of any community. Economic conditions both reflect a community’s quality of life and impact that quality of life. Many economic conditions are worth considering in a General Plan. The first part of this section presents an analysis of Stockton’s job market. The second part of the section links economic conditions to other topical areas, such as transportation and demographics.

An analysis of the jobs and industries present in Stockton communicates what opportunities exist for employment here. Stockton will attract new residents who want opportunities in those jobs and will detract those with skill sets not aligned with the available job opportunities. Additionally, a jobs and industry analysis can reveal options for economic diversification, perhaps leading to better employment opportunities as well as a stronger, more robust local economy. Identifying gaps in the market also provides insight into what kinds of local businesses might flourish in Stockton.

To best understand economic development options, transportation, land use, housing, and demographic patterns must all be taken into account. Why? Most businesses need physical space to operate in (land use). Most businesses want on-site employees (demographics), and those employees have to transport themselves between their homes and their jobs (housing and transportation). The second section explores some of these connections and what they may mean for Stockton’s economy.

Vision: Stockton will be a thriving small town with pride in its history, culture, and community, as shown through a healthy Main Street with several successful local businesses that bring revenue to the town and provide convenient, essential services to residents.

Vision: Stockton will preserve the natural beauty of the town by promoting environmentally conscious practices while creating opportunities for residents and visitors alike to immerse themselves in the community’s scenic landscape.
Economic Analysis Tools in Planning

Good planning requires good data. But how do we analyze economic trends? In this chapter, we use location quotient and shift-share as two tools capable of telling us about opportunities and patterns in Stockton’s economy. Much of this data is not available at the town level, so we looked to county data to help us.

Location Quotient shows how concentrated an industry or occupation is in the region (Tooele County) compared to the United States as a whole. This comparison is useful because it reveals which industries a region has a competitive advantage in. What industries are uniquely concentrated near Stockton? And how do we benefit from that?

Shift Share Analysis determines how much of regional job change is because of national trends or regional (local) factors. Using location quotient and shift-share together allows us to determine whether an industry is growing, emerging, transforming, or declining in an area.

ROOM FOR BUSINESS?

Economic patterns can reveal gaps in the market. Such gaps are where there is unmet demand for services. New businesses that fill these gaps are more likely to succeed than new businesses that occupy the same niche as existing ones. Stockton residents have expressed the desire for some small businesses to be located in town, both as a means of local employment and of convenience – no more driving to Tooele for the brown sugar to bake Grandma’s famous chocolate chip cookies.

As the largest city in Tooele County, Tooele City hosts many of the areas’ businesses. For a business to succeed in Stockton, it needs to offer goods or services dependably and at a price, quality, and/or variety that outcompetes the larger options in Tooele, or it needs to fill a niche in the market that is missing throughout Tooele County.

An economic analysis was conducted for Tooele County to identify industry sectors with the most potential for growth. First, the 2019 Location Quotient (LQ) was calculated as (local industry employment / total local employment) / (national industry employment / total national employment). Then a Shift Share Analysis (SS) was conducted. Using the combined LQ and SS scores, each industry was placed into one of four quadrants: declining (not competitive and LQ < 1), transforming (not competitive and LQ > 1), growing (competitive and LQ > 1), and emerging industries (competitive and LQ < 1).

While Stockton may wish to target a mix of growing and emerging industries, strategies focused on attracting and retaining emerging industries are likely to be most successful. Emerging industries represent those that are expected to continue growing nationally but have not yet developed a local concentration.

Stockton should cultivate growth in the emerging industries.

Emerging industries are competitive and have a growing local effect (although current employment concentration may not be high). The low local concentration of employment for emerging industries indicates potential for growth of these industries in Tooele County. Stockton should be prepared for increasing opportunities to welcome employers in information, health care, and finance and insurance into town.

The needs of these industries may include increased supply of office spaces. This could take the shape of a rural office park or even small offices tucked into already existing buildings (or buildings also housing retail). Telecommuting infrastructure could also be expanded to give residents the opportunity to work from home in industries that allow them to do so.
STOCKTON’S WORKFORCE

Who, What, When, and Where?

In 2018, 335 Stockton civilians were employed. The most popular occupations and the number of employed civilians are:

**SALES AND OFFICE 79**
47 in office and administrative support + 32 in sales

**SERVICE 76**
44 in food preparation/serving + 16 in protective services + 9 in personal care + 7 in building/grounds maintenance

**PRODUCTION, TRANSPORTATION, AND MATERIAL MOVING 71**
30 in production + 21 in material moving + 20 in transportation

**NATURAL RESOURCES, CONSTRUCTION, AND MAINTENANCE 44**
30 in construction and extraction + 14 in installation, maintenance, and repair

Currently, the following employers and businesses are present in Stockton:
- HUNSAKER’S SPECIALTY CHEESE - CHEESE STORE
- JACK B PARON CO. - CONCRETE CONTRACTOR
- STOCKTON STATION - CONVENIENCE STORE
- TOWN OF STOCKTON - MUNICIPAL SERVICES
- THOMAS TAX - TAX PREPARATION SERVICES
- UNITED STATES POSTAL SERVICE - POST OFFICE

Characteristics of the Labor Force.

Among Stockton’s **170 MARRIED-COUPLE HOUSEHOLDS**, 65 households report both partners working and 34 households report that neither partner works. For 37 households, only the husband works, while for 34 households, only the wife works. For all families in which only one parent is present, that parent is currently in the labor force.

Half of Stockton’s workforce leaves home for work at traditional hours. However, a full 44% leave Stockton between 12:00 am and 5:00 am. About 25% leave between 5:30 to 6:30 am, and about 29% leave between 6:30 to 8:00 am. Additionally, there is a difference in commute times according to gender: 44% of male workers leave by 6:30 am while only 27% of female workers do. Vice-versa, 30% of female workers leave a bit later, between 7:00 and 8:00 am, while only 20% of male workers leave then.

WHAT DOES IT MEAN FOR STOCKTON?

1. **DAYCARE SERVICES MAY BE IN DEMAND.** In 136 households, all parents/the only parent present works. What opportunities exist for childcare while parent(s) work(s)?

2. **PUBLIC TRANSIT MAY BE MOST SUCCESSFUL IF OFFERED AT TIMES THAT WOMEN COMMUTE.** Why? Because women ride public transportation more than men (Sarah Goodyear, CITY LAB, 2015).

3. **CONSTRUCTION PROJECTS occurring in and around Stockton may be able to employ Stockton residents, as a full 30 people are employed in construction and extraction occupations. Additionally, the town can utilize the skill sets of its residents to build community projects.**

4. **THE LABOR POOL NECESSARY for successful local businesses such as cafes, restaurants, or home repair is present.** This means that for a local business to be successful, the focus shifts to generating enough demand.
From the data and the survey responses, it is clear that Stockton needs economic development strategies tailored to its small-town culture. The addition of several local, small businesses to Stockton’s Main Street would accomplish several things: provide convenient access to goods and services, increase local employment opportunities, increase town revenue through sales tax (enabling desired community improvement like road maintenance), strengthen the town’s sense of place, showcase the town’s historic and cultural roots, serve as a gathering place for the community, and promote walking and biking. Ordinances regarding the style, design, and density of the commercial area can ensure that all new businesses reflect Stockton’s character. A collaborative marketing campaign among business owners could be an affordable way to help promote these new businesses. Because market analyses show that information, health care, and finance and insurance are industries likely to be successful in Stockton and Tooele County, local entrepreneurs may want to consider opportunities in those industries. Providing high speed, reliable internet can enable residents to successfully work from home and will support in-home businesses.

**The Benefits of a Strong Main Street**

Why are so many communities turning focus back to their Main Streets and downtown corridors? More and more, economists, local elected officials, planners, and residents alike are recognizing the economic and social benefits of a healthy Main Street. A strong Main Street reflects that a community is hopeful, proud, and has a high level of investment in its wellbeing. A well-maintained, healthy central core thus communicates to residents not only that the town is worthy of their investment but also that they, the residents, deserve to live in a great place.

The word cloud below summarizes these and other benefits:

What Is the Value of Access to Parks and Open Spaces?

Parks enhance the quality of life while elevating the environmental and economic vitality of the community. They contribute to the health of residents by providing a place for fitness and recreation programs. Numerous studies have shown a link between access to recreation and physical and mental health. Parks can also serve as a community gathering place where social connections can be made. In addition, they increase land value and can act as a catalyst for businesses to locate nearby.

RECREATION

The natural landscape of Stockton provides a unique opportunity. Recreation is one of Stockton’s biggest assets. Preserving the scenic landscapes while maintaining small-town charm is one reason why people are drawn to the area. Stockton’s location offers abounding views of the surrounding mountain ranges and offers a peaceful setting to live, work, and play.

The town of Stockton has one official city park, Alex Baker Memorial Park. The park is located along Copper and Roger Streets, on the eastern side of the town. It features a baseball diamond, playground, picnic areas, and supporting facilities. Additionally, the Stockton Veterans Memorial is located near the northern entrance to town, at the northwest corner of State Route 36 and Kings Avenue. The memorial honors the men and women who fought for this country as well as those who were prisoners of war or missing in action. There are flags to represent each branch of the U.S. Military.

Although hosting only one park, Stockton’s proximity to the Oquirrh Mountains broadens recreational opportunities for residents. The Jacob City Loop and South Mountain Loop trails provide hiking, mountain-bike, horseback, and ATV/OHV trails. They are maintained by the Tooele County Department of Parks and Recreation and the Tooele County Trails Commission. While these trails are not owned or operated by the Town of Stockton, they are truly assets to the community. Additional trails in the Oquirrh Mountains are available to residents within a short 15-minute drive.

Opportunities for recreation also exist in the City of Tooele, approximately a 10 to 15-minute drive from the town. The Great Salt Lake, Wasatch Mountains, and Salt Lake City Metropolitan Area further expand recreational opportunities for the residents of Stockton within reasonable travel distances.

“We know who we are. We are rural folk who like playing outside - hunting and fishing, off-roading, and playing baseball.”
- Mayor Karjola, to students from the University of Utah (February 2020).
Regional Opportunities

While Stockton may be a small community, there are huge opportunities to connect the Town to nearby amenities. Partnering with Tooele County and other entities could bring new ATV/OHV trail connections, linking the community with existing trails in the area. While ATV/OHV use is prevalent in Stockton, these trails could also be used for walking and running. The town’s location between the City of Tooele and additional county maintained trails makes Stockton an ideal link in the future recreation network within Tooele County.

The map to the right shows Stockton’s proximity to large swaths of BLM, Forest Service, and State Trust Land. It also shows an abundance of off-roading trails weaving through the mountains. Stockton would benefit from engaging in regional planning efforts to connect trails and provide access to residents.

Recreation is extremely important to Stockton residents. Seven (39%) of Development and Opportunities Survey respondents were most excited about the opportunity for new parks and trails in town. Similarly, nine respondents (50%) thought the location and size of open space and natural areas was one of the key considerations for maintaining Stockton’s rural atmosphere.

One thing Stockton values is its proximity to the Great Outdoors. Residents and visitors alike love taking advantage of the town’s mountainous location. Off-roading is particularly popular. Photo contributed by Tyler Bowden 2020.
MOVING FORWARD

Residents of Stockton value the mountainous countryside they call home. Scenic charm is an asset for the community and is something to be preserved even as the town experiences the pressures of growth. Stockton has a unique opportunity to capitalize and enhance upon the natural features of the area. Implementing an open space or conservation ordinance can help ensure that the town’s most unique landmarks and valuable viewsheds are preserved. Prioritizing trail development will increase recreational opportunity while connecting residents to essential services within the town. Volunteers can also help the town reduce maintenance costs while building character and community.

Stockton recognizes its place within the Great Basin Desert. Like many arid communities, water conservation becomes increasingly important as new residents and businesses locate in the area. Town efforts to encourage sustainable water use will help Stockton preserve vital resources. Landscaping requirements and a focus on drought-resistant plants reduces water usage, may lower utility costs, and leads to beautiful and unique landscapes. With residents placing high value on affordable living and Town aesthetics, these small changes will have lasting impacts on Stockton’s future.

What does it mean to be “water-wise”?

“Water-wise” plants have lower water needs and are better suited to Utah’s dry climate. These plants require less water during the growing season than typical plants commonly found in residential and business landscapes. Utilizing “water-wise” plants will help conserve water, lower utility costs, and improve sense-of-place, all while maintaining a beautiful landscape.

### Economic Development and Recreation

#### Objective 1: Stockton will develop strategies to fund the addition and enhancement of recreational amenities.

Stockton must go through a special process to adopt an Annexation Policy Plan, in accordance with §10-2-Part 4 of Utah Code. The materials drafted in this section are meant to help the Town along in this process. Before a policy plan is adopted and implemented, it must be brought before all affected entities, as defined by Utah Code. These affected entities may include Tooele County, the Tooele School District, the Utah Department of Transportation, the Police, Fire, and Culinary Water Authorities, and the residents of Stockton and the proposed expansion areas as defined in the plan.

An annexation policy plan is subject to a public hearing first by the planning commission, and then by the town council after the commission has given its recommendation. Once adopted, this plan will guide Stockton's decision-making process for any annexation petitions that are submitted to the Town. The Town may not annex any land that is not included within one of the proposed expansion areas defined in the adopted policy plan.

Vision: Stockton will wisely manage growth, only annexing lands when doing so benefits both the Town and the residents living in the area to be annexed, and when Stockton has the capacity to adequately provide services to all impacted areas.
**What is an Annexation Policy Plan?**

Annexation is the process by which "land is transferred from one unit of government to another" (American Planning Association 2017). In Stockton, this would mean expanding boundaries to include parts of currently unincorporated Tooele County. As determined by Utah Code §10-2-401.5, a municipality may not annex any unincorporated area without first formulating and adopting an annexation policy plan. Stockton’s adoption of an annexation policy plan does not result in any land being annexed but lays out the guidelines under which annexation could occur in the future.

Government bodies typically choose to annex to increase the local tax base and expand the local authority over planning and zoning. The adoption of an annexation policy plan gives Stockton a voice in any development that occurs outside of its boundaries. To the north of town, much of the land is used for extraction, with Peak Management LLC owning nearly 140 acres. To the east, land is owned by Kennecott, the State of Utah, and the Bureau of Land Management (representing a mix of extractive and recreational uses). The region to the south of Stockton is primarily owned by independent households, with the exception of the water conservancy area surrounding Rush Lake. The most developed area surrounding Stockton lies to the west of town, at South Rim. This subdivision currently occupies 975 acres (development agreement with Tooele County). But South Rim additionally owns nearly 3,500 acres surrounding the current subdivision; it is unclear whether or not South Rim has intentions to eventually develop this land.

The map on pages 64-65 defines Stockton’s potential expansion areas.

**PROPOSED EXPANSION AREAS**

Stockton occupies only 1.69 square miles of land and water. Most incorporated parcels suitable to residential, commercial, or industrial uses have already been developed. Thus, annexation provides an opportunity for Stockton to acquire room to grow. However, the town faces constraints even outside of its boundaries. To the north of town, much of the land is used for extraction, with Peak Management LLC owning nearly 140 acres. To the east, land is owned by Kennecott, the State of Utah, and the Bureau of Land Management (representing a mix of extractive and recreational uses). The region to the south of Stockton is primarily owned by independent households, with the exception of the water conservancy area surrounding Rush Lake. The most developed area surrounding Stockton lies to the west of town, at South Rim. This subdivision currently occupies 975 acres (development agreement with Tooele County). But South Rim additionally owns nearly 3,500 acres surrounding the current subdivision; it is unclear whether or not South Rim has intentions to eventually develop this land.

The map on pages 64-65 defines Stockton’s potential expansion areas.

**Proposed Expansion Area #1: South Rim**

Proposed Expansion Area #1 is the most heavily developed area immediately outside of Stockton. It consists of approximately 1613 acres, connected to the western portion of town by Silver Avenue. Much of the land in this area is owned by South Rim, and it is expected that future development will be primarily residential. It all of Proposed Expansion Area #1 was annexed today, it would exceed to Stockton’s projected 2025 population.

The South Rim Special Services District is responsible for providing most utilities to the subdivision. Stockton’s water and sewer lines stop short of the western boundary along Silver Avenue. Significant expansion would be required to make connections to Proposed Expansion Area #1, but the area could provide Stockton with additional opportunities for residential development.

It should be noted that a few parcels owned by the Bureau of Land Management are included in the expansion area as defined. It is not Stockton’s intention to allow development on this land. The parcels are included because Silver Avenue, the street connecting the Town of Stockton to the South Rim development, runs through them. The map on pages 64-65 defines Stockton’s potential expansion areas.

**Proposed Expansion Area #2: Southern Corridor**

Proposed Expansion Area #2 encompasses 417 acres along Highway 36 on Stockton’s southern border. This area currently features low-density residential and agricultural land uses. It offers opportunities for future residential development for the Town of Stockton. In addition, annexing land along this stretch of Highway 36 may provide space for commercial growth. The Highway connects Stockton residents to Vernal and Lehi, and is the main route through town for outdoor recreation-enthusiasts.

The Town’s sewer and water mains reach considerably closer to Proposed Expansion Area #2 than to Proposed Expansion Area #1. Extensions to current services could possibly be provided from the west (across Highway 36) or from the east, along Copper Street.
The Annexation Process

1. An area may petition to be annexed into Stockton if it is a contiguous, unincorporated area of Tooele County that is also contiguous to the boundaries of Stockton and is included in Stockton’s potential expansion areas as defined in the Annexation Policy Plan.

2. Before filing a petition, the applicant must send a notice of intent to file a petition to the Town of Stockton and to all affected entities, as defined in Utah Code. Notice shall include an accurate map of the area proposed to be annexed.

3. In keeping with Utah State Code 11-2-403, the Town will not provide an applicant with the official annexation petition until the county has filed notice as required by Utah State Code 11-2-403(20).

4. Once the official annexation petition form has been provided to the applicant, the applicant shall obtain all the signatures required by Utah State Code 11-9-403(3). The applicant shall file the petition with the Town Clerk and mail a copy to the County Clerk.

5. The petition will be reviewed at the next scheduled meeting of the Stockton Town Council, at least 14 days after the petition has been submitted. The Council may deny the petition, providing the applicant with a written statement. Or the Council can approve the petition for further consideration under Utah Code 11-9e Part 4.
INFORMING
THE POLICY

Community Character
When deciding on a petition for annexation, the Town Council shall consider the character and needs of the existing community and the expected impact of annexation. Stockton prides itself on its small-town feel, but that does not mean that no growth should occur. In fact, to provide housing to the next generation of children and to provide room for the small businesses that residents desire, it may be beneficial to annex land in specific areas.

By 2025, the population of Stockton is expected to grow to 945. Current zoning patterns would not allow the Town to develop the housing, amenities, and services necessary to accommodate this increased population. Stockton may at times consider annexation a favorable alternative to re-zoning. An annexation petition may be denied when such annexation would lead to negative consequences for Stockton’s character.

Impact on Municipal Services and Taxes
Stockton residents currently receive fire and police protection, planning and zoning services, snow removal and street maintenance (on paved roads), curbside garbage collection, and culinary water and wastewater services. Residents also have access to the Town’s cultural and recreational amenities. No annexation shall be granted if the annexation results in the loss of those services for current Stockton residents, or in the inability for Stockton to provide those services to annexed residents.

Services are primarily paid for through property taxes and usage fees. Garbage pick-up costs a base fee of $25.00 per can, with an additional monthly fee of $12.00 per can. Sewer service causes $43.50 per month. Additionally, water costs $25.00 per month, with an added fee based on water usage (costs current as of April 2020, according to Stockton Utilities Webpage).

Taxes and utility costs for Stockton are already high relative to the income of current residents. The anticipated financial outcomes for both current and future residents will strongly guide annexation decisions.

The Interests of Affected Entities
The interests of the affected entities are not yet known. Feedback from these entities must be gathered prior to the first public hearing on the draft annexation policy plan. Affected entities are defined in Utah Code. Stockton will address all the concerns of these affected entities within this policy plan.

Regional Considerations
The proposed expansion areas included in Stockton’s annexation policy plan do not overlap with the potential expansion areas of any other municipality. Tooele City shows potential expansion to the north of Stockton. Lands currently used for extraction separate Tooele’s expansion areas from the Town boundary. Stockton is not interested in annexing this land to the north.

No annexation policy plan is available for Rush Valley Town. Rush Valley may have an interest in annexing the South Rim Development at a later date, but that interest has not been expressed. Silver Avenue, running through Stockton, is the subdivision’s current route to major destinations. This means Stockton is the most prepared of any other nearby municipality to provide services to these residents in the event of a future annexation.

Exclusions
The proposed expansion areas do not exclude any developed land, as defined by Utah State Code, within 1/2 mile of the Town boundary. As development continues to occur in the unincorporated areas of the county, Stockton will re-evaluate its proposed expansion areas.

Policies
1. Stockton may consider the goals of the general plan and the expected impact an annexation will have on community character in its decision on an annexation petition.

2. Upon annexation, any new land will automatically be zoned as A-2 until the Commission and Council approve a new zoning designation for the annexed area.

3. As a part of the annexation petition, an Applicant must submit a study of the impacts of annexation on the Town’s cost of providing services, tax revenue, infrastructure capacity, community character, and any other consideration(s) deemed necessary by the Commission or Council.

4. The Applicant may be asked to mitigate any negative impacts of annexation on the Town’s character or resources prior to approval of the annexation. Such mitigation strategies may include payment for utility extensions, dedication of water shares, payment of impact fees, or any other action deemed necessary by the Commission or Council to minimize negative impacts of annexation.

5. Newly annexed areas shall immediately receive the following Town Services: police and fire protection, culinary water and wastewater service, planning and zoning service, snow removal and street maintenance (on paved roads), and garbage collection. No annexation shall be approved if Stockton is unable to provide the above services to existing and new residents. The Town may deny an annexation if the cost of providing these services places too heavy a burden on existing or future residents.

6. Stockton will not annex any land that is not located within its proposed expansion areas, that is not contiguous to Town boundaries at the time of annexation, or that results in unincorporated islands or peninsulas.

The Role of Water:
Water has consistently been one of the most unreliable Town services. Stockton’s supply of culinary water depends largely on the rain fall that accumulates in the surrounding mountains each year. In 2018, supply was so limited that a watering schedule had to be imposed on residents. Any annexation petition must consider water supply in its analysis. Where an annexed area is expected to use significant amounts of culinary water, the Commission and Council may ask that the Applicant addresses mitigation efforts.
